

# Innovation and Sustainable Development in Civil Engineering Degrees: Constructing Structures with re-used skis

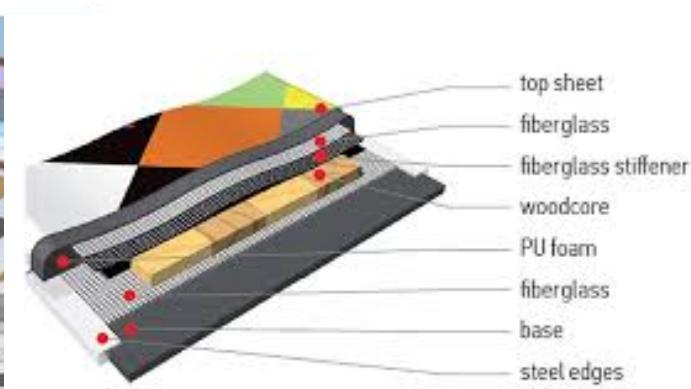

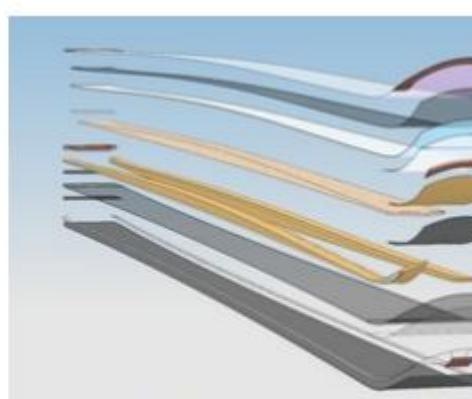

**Yannick SIEFFERT - Dominique DAUDON**  
**L3SR- PHITEM-Grenoble Alpes University**

# Innovation and Sustainable Development in Civil Engineering Degrees: Constructing Structures with re-used skis

- **Sustainable development teaching Challenges**
- **Re-Use of skis**
- **Geodesic Dome Project**
- **Other skis's projects**

## Re-Use of skis : Why ?

Annual production =3.5 M pieces in the world, and 0.47 M in

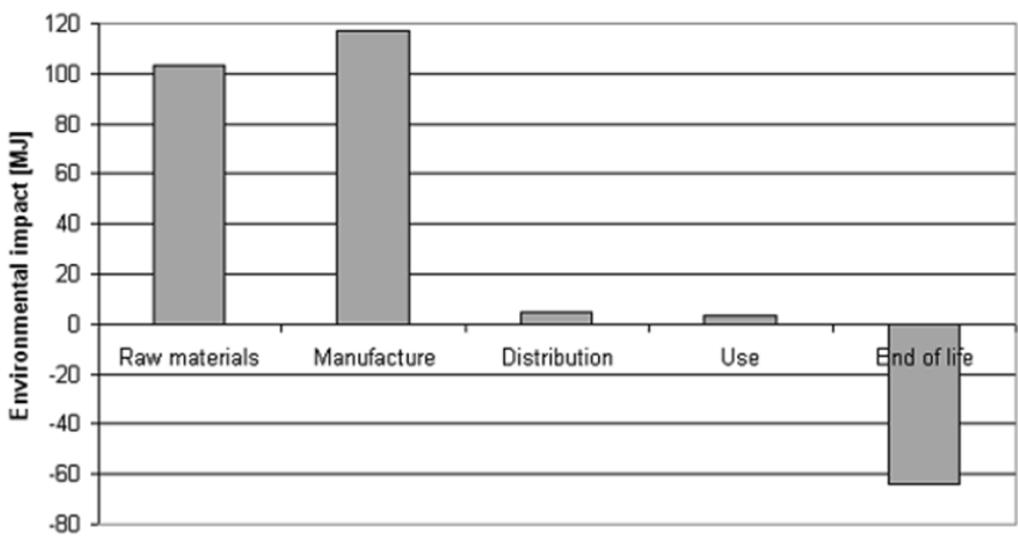

Wood only

ten differents materials

complex and sophisticated structure

### ***environnemental impact of an alpin ski (OST 08)***

***Foot-print in Kg  
Equivalent of Co2***

**22 kg-17kg /skis;** (Luthe 2013)  
**Multplied by 1500 t or 0.4 M of paires.....**

***3kg /kg of crud spaghetti***  
Tesco 2012

***And because I like  
skiing.... 3***

# 2015 : What happen to old fashioned skis....

## Waste disposal

183.7 kJ /skis (Herva 2013)

## Re-using : various original products

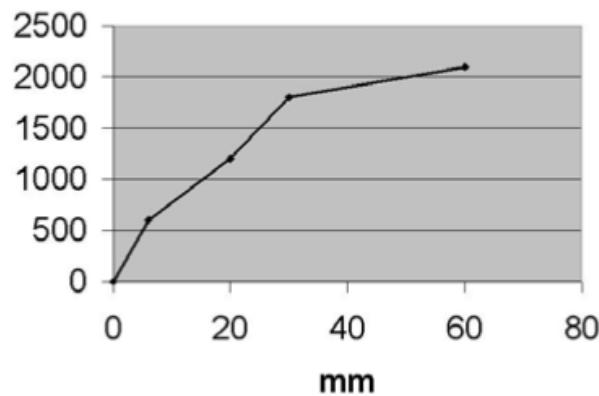

<http://www.latribune.fr/>

<http://www.instructables.com>

A so Sophisticated product needs a more sophisticated 2<sup>nd</sup> life ! Baverel 2005, 2013

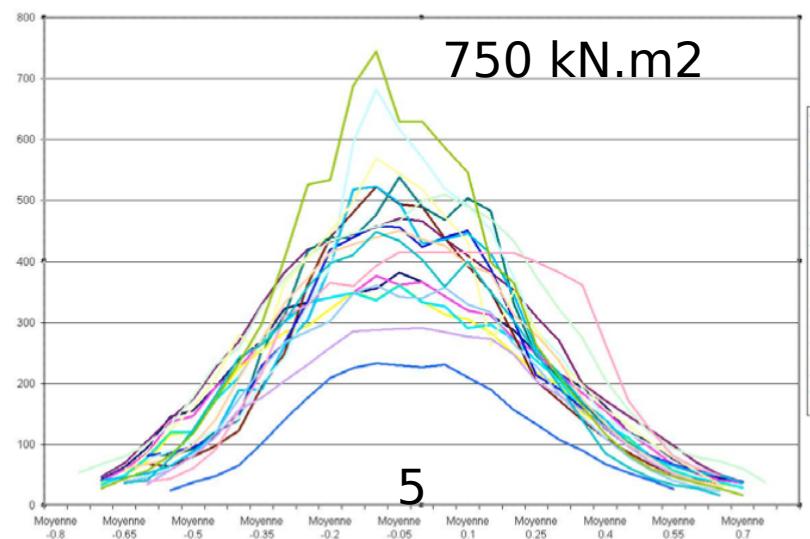

Load Vs Displacement

collapse

Variability Ski stiffness

# **to Design AND to Construct a temporary structure for festive events with Re-used Skis**

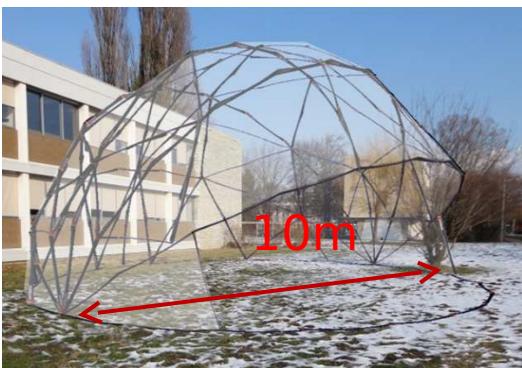

## Game Rules

- Assembly and Disassembly quickly
- LEGO/IKEA notice type
- 100 m<sup>2</sup> of usable surface
- Protected against sun, rain ...
- NO Cutting, lightweight, mecanical performance
- Eurocodes verification
- Inauguration for the defense

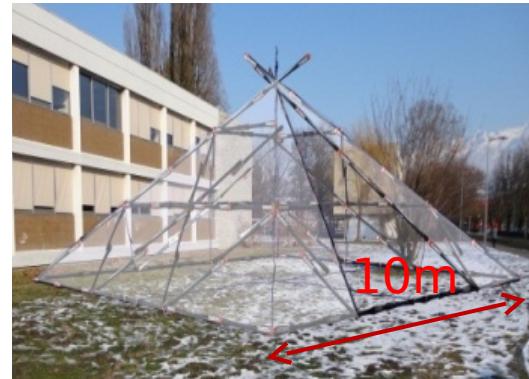

## Playing to

- Architecture agency
- Design agency
- Construction agency

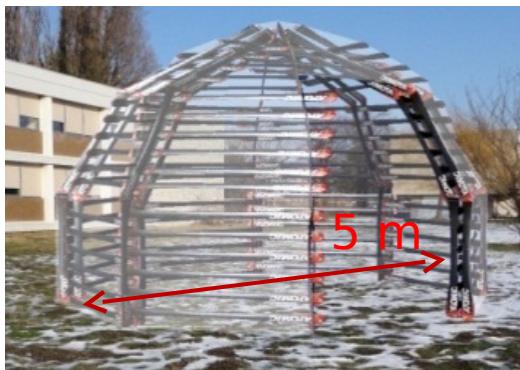

# Architecture agency

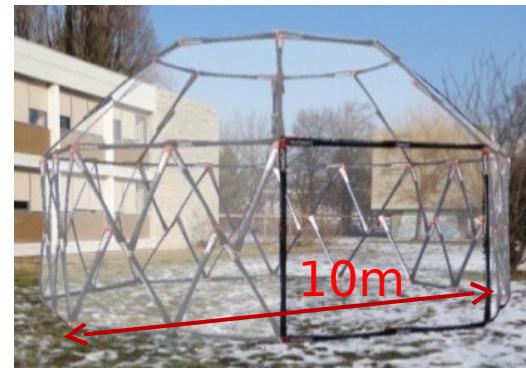

dome (high volume)  
183 skis

pyramide (small volume)  
149 skis

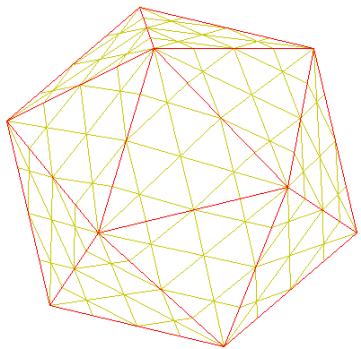

« tonnelle » (too much skis)  
148 skis

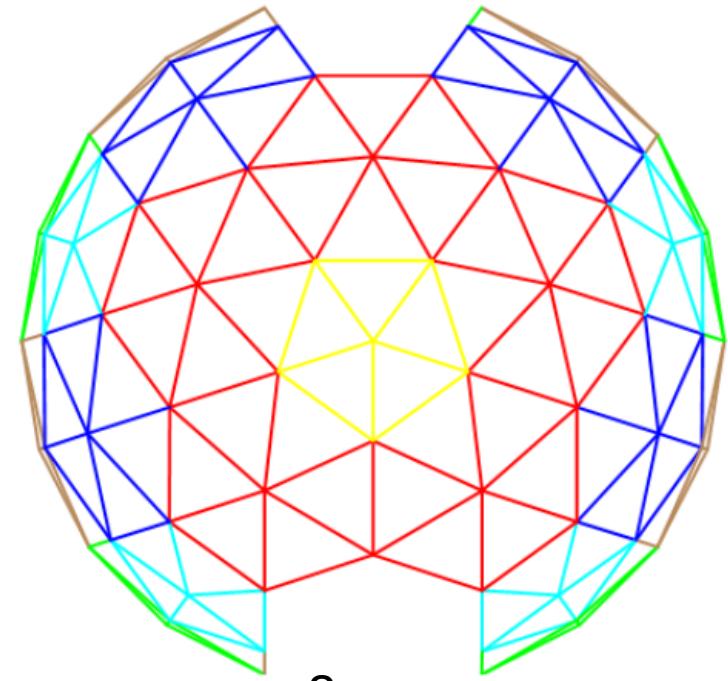

yurth (OK to improve)  
116 skis

# Geodesic Dôme (fascinated by the mathematical rules of design)

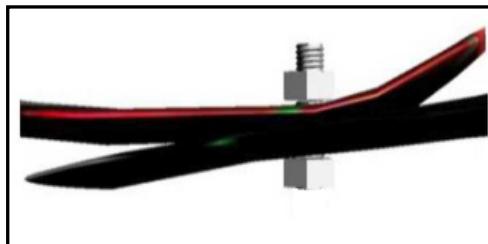

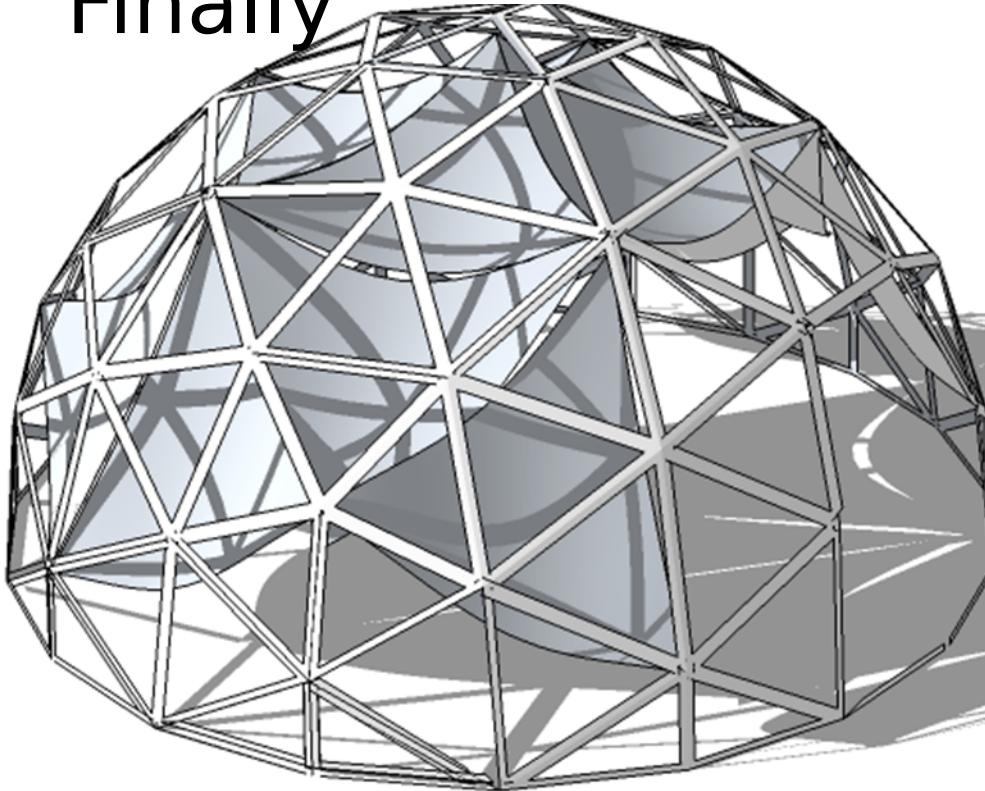

- From icosaèdre and projection on a sphere
- Variing dimension depends on the rank !
- percing lenght

LONGUEUR	No DE SKIS
0,69 m	4
0,74 m	4
1,13 m	4
1,15 m	21
1,25 m	16
1,33 m	15
1,34 m	13
1,41 m	10
1,42 m	8
1,43 m	18
1,44 m	30
1,45 m	8
1,46 m	25
1,47 m	4
AU TOTAL: 180	

# Finally

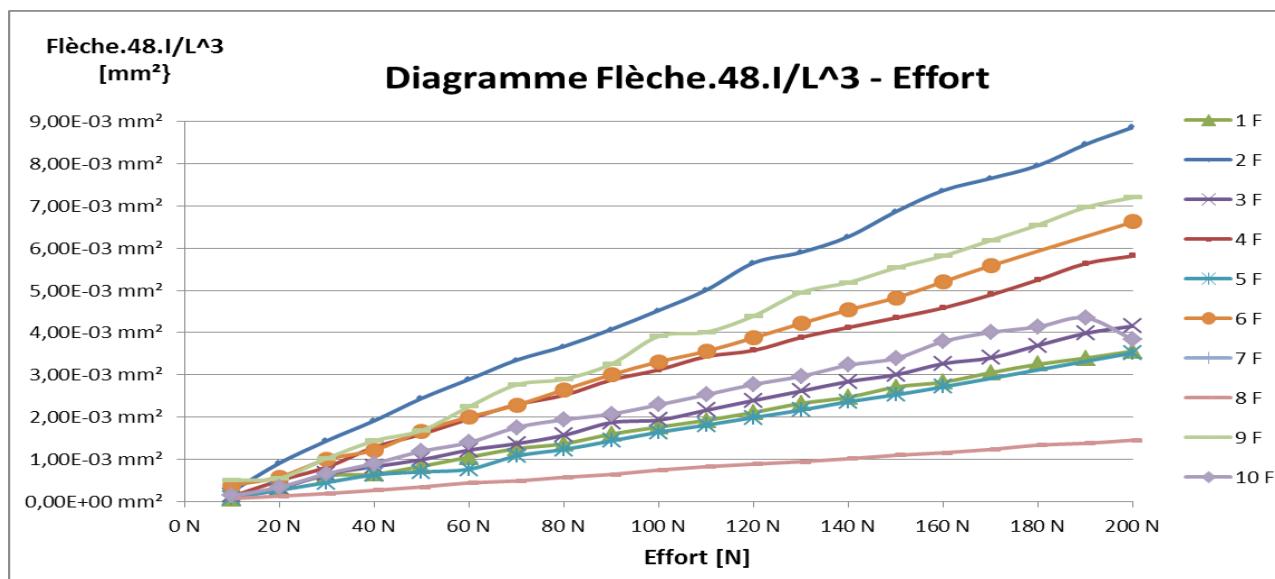

- hexagones and pentagones
- No bump
- 8 m of diameter
- 4 m high
- Triangles of canvas as suspended ceiling
- 2 opposed entrances
- 180 skis classified by height
- Laid flat (minimal rigidity)
- 79 Nodes of 3 to 6 skis

# Bending Results

## Basic Bending interpretation (constant inertia)

- $f = P \cdot L^3 / (48 \cdot E \cdot I) \rightarrow E = P \cdot L^3 / (48 \cdot f \cdot I)$
- Mean Young Modulus **Emoy = 51,8 GPa** (steel= 210 Gpa)
- Mean inertia **Imoy = 9.1<sup>E-9</sup> m<sup>4</sup>**
- Mean rigidity **EI = 0.471 KNm<sup>2</sup>**

# Tension tests on assembly

3 tests

Spatule-Talon  
Spatule

Talon-Talon

Spatule-

collapse

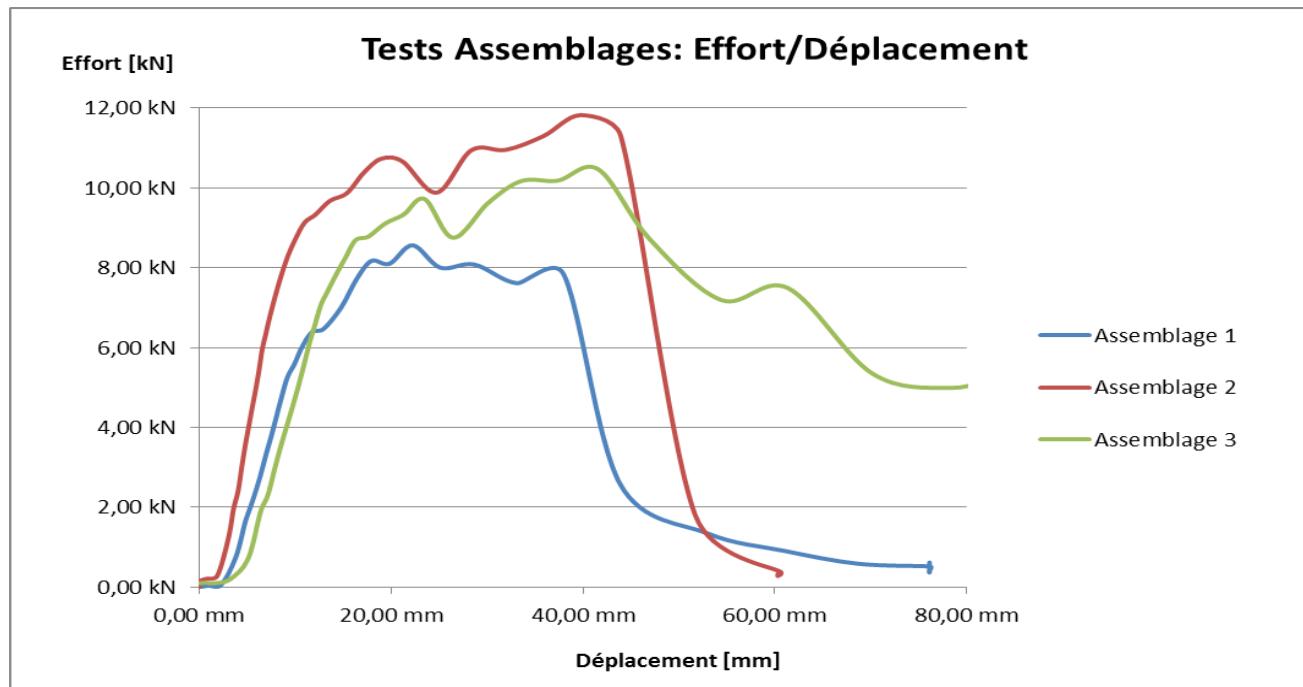

collapse

# Tension Tests Results

## Résistance des assemblages en traction

- Valeur limite de traction **F<sub>t</sub> = 8,56kN**
- Choix **F<sub>t</sub>, lim = 7,5kN**

**Assemblage 1 :**  
Les deux spatules  
assemblées

**Assemblage 2 :**  
Une spatule associée  
à un plat

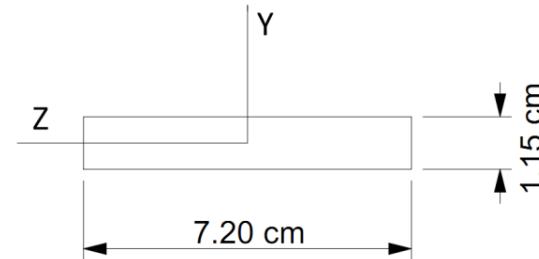

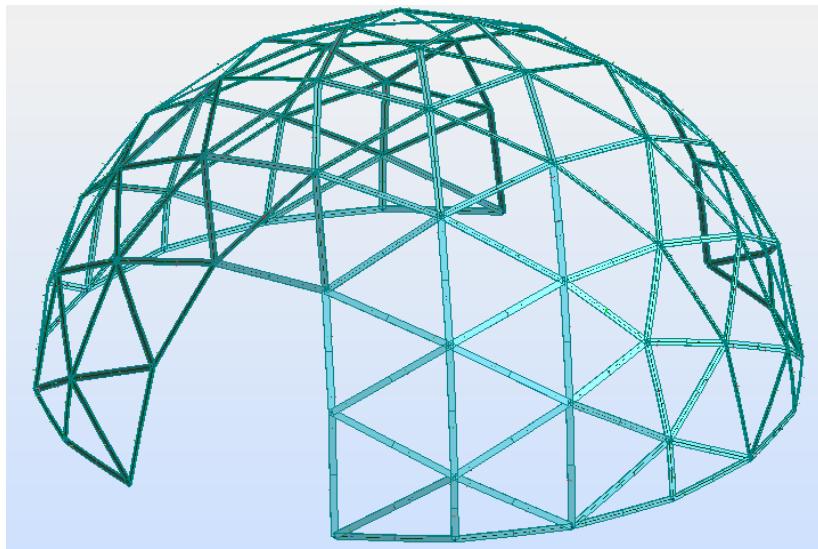

**Assemblage 3 :**  
Les deux plats  
assemblés

# « Eurocodes » Verification

- Robot structural engineering

Hypothesis :

- constant section,
- no curvature, but bi-slope

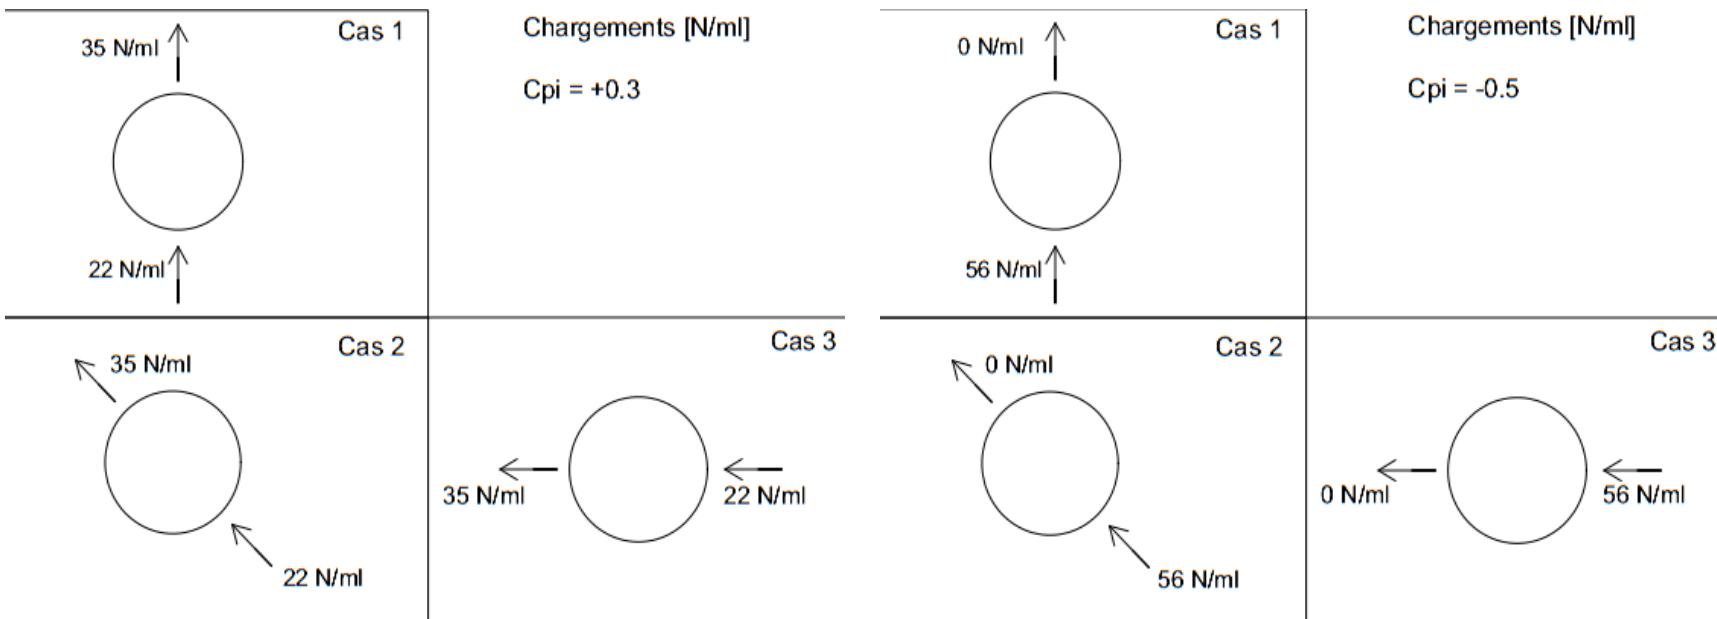

<b>Inertie faible moyenne Totale</b>	9,1E-09 m <sup>4</sup>
<b>Module Emoyen Totale</b>	51801 MPa
<b>Contrainte admissible</b>	190 MPa

# Load cases

## Own weight load

- Based on **2Kg/ski**
- weight: **22.84 Kg/m<sup>3</sup>**

## Climatic loads (Cpi 0.3, -0.5)

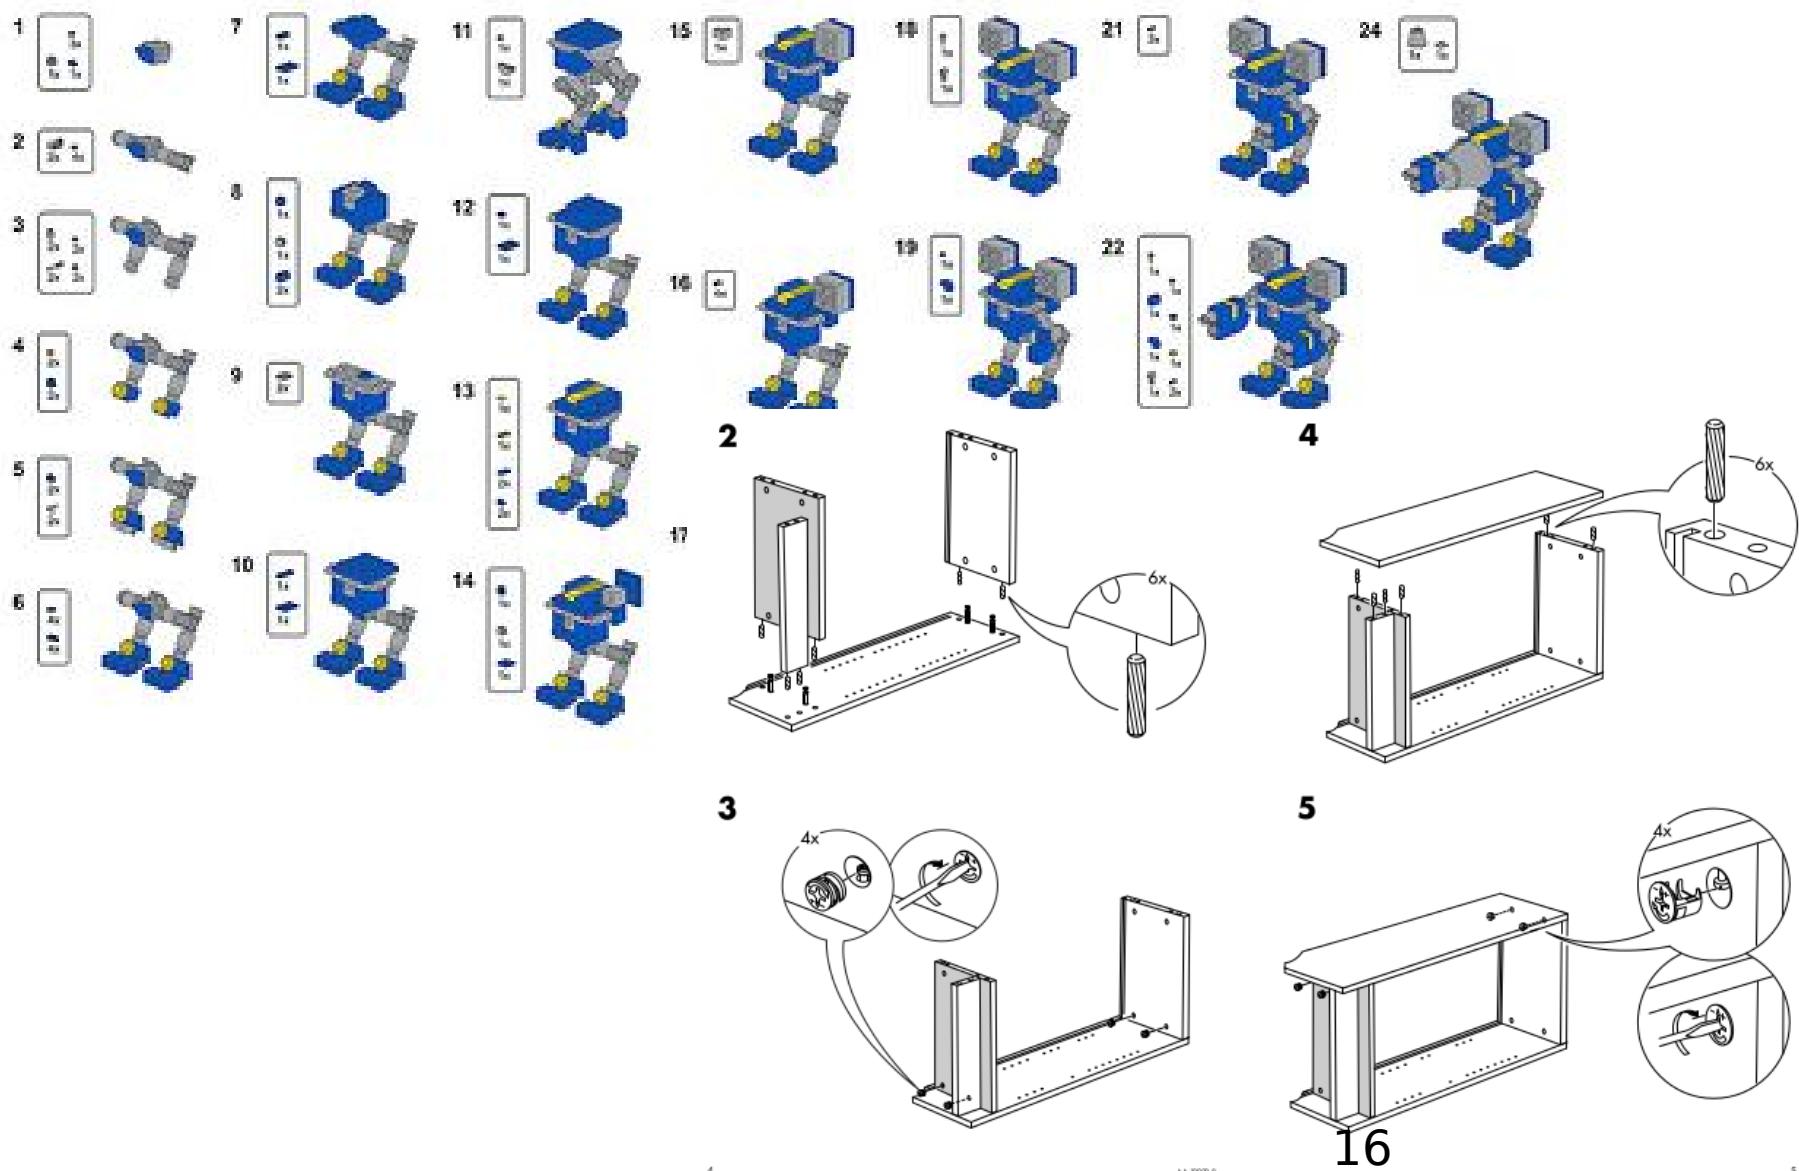

# Load Cases

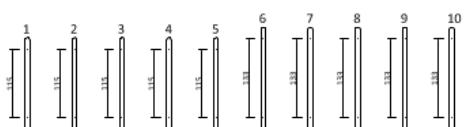

- Combinaison fondamentale 1.35G+1.5.W à l'**ELU**
- **Buckling analysis** compression in skis, Traction
- no more than **300 daN**
- Stress max = de **56.73 MPa** << Limit Stress **190 Mpa**
- **(no canvas.....)**
  
- Résults of displacements with ROBOT (4 cm, 10° )

	UX [cm]	UY [cm]	UZ [cm]	RX [Rad]	RY [Rad]	RZ [Rad]
<b>MAX</b>	2,585139654	4,697169750	2,235705753	0,102	0,164	0,046

Réalisation de l'élément : B2

# Elementary element test and mounting

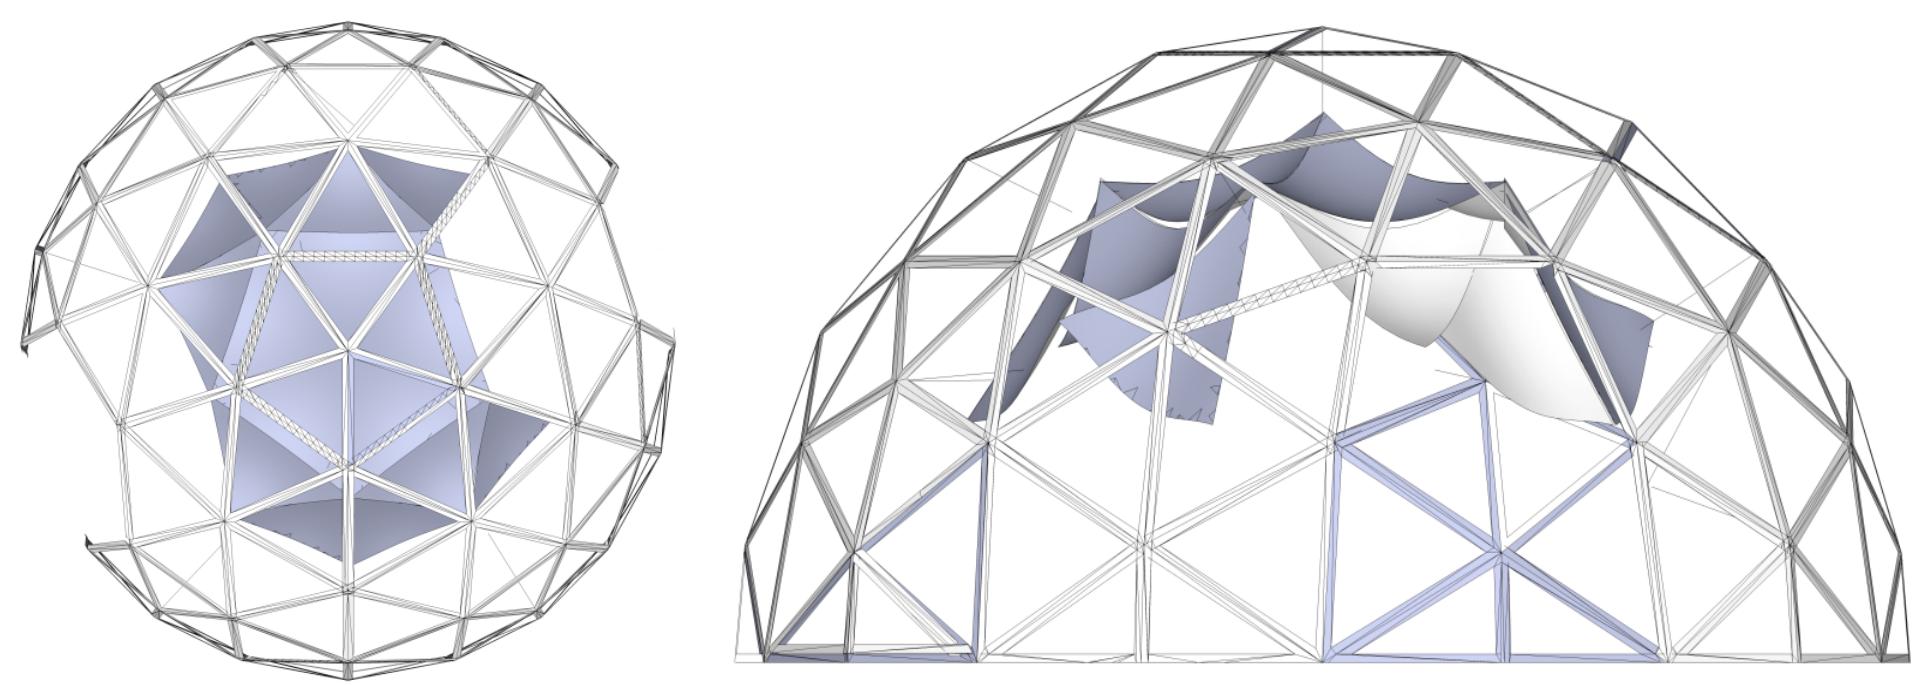

- deployed pentagone
- Folded Pentagone

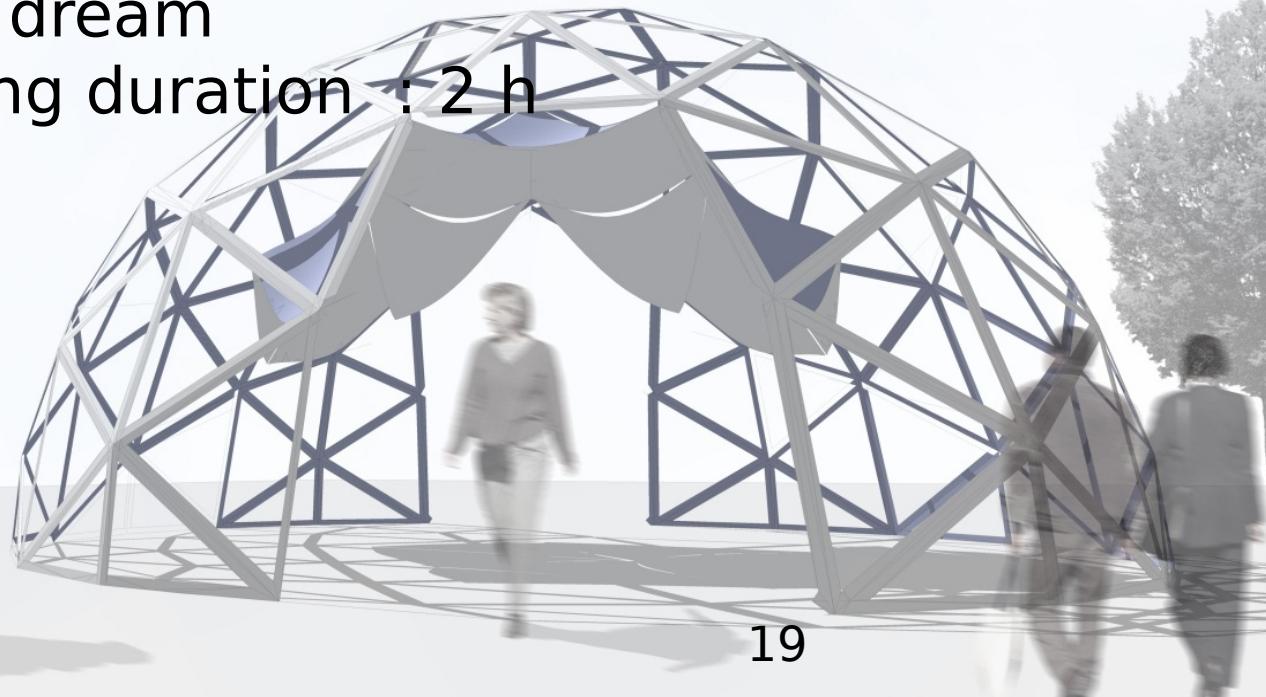

- a chinese girl student....
- a french boy student

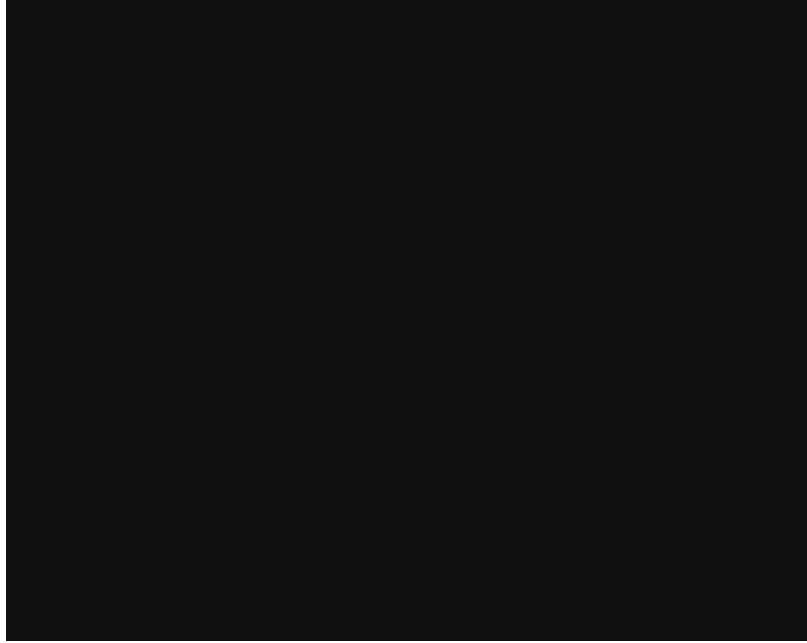

The architecte girls dream  
Planificated Mounting duration : 2 h

# Reality .....

mounting duration : 6 hours

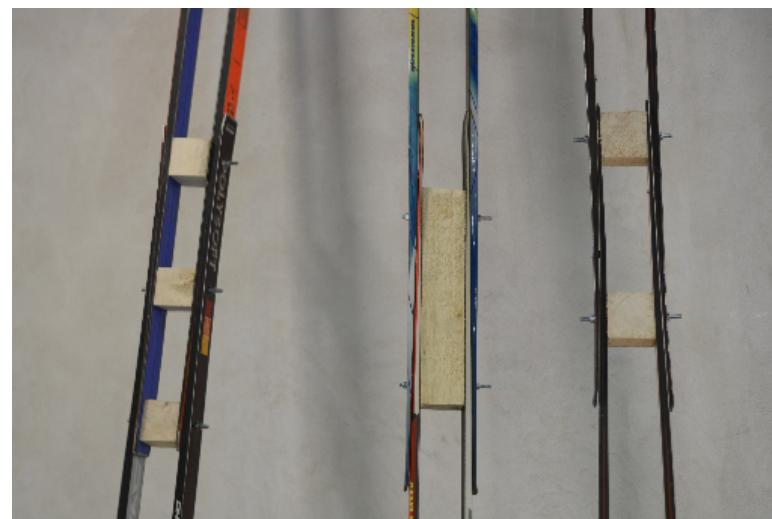

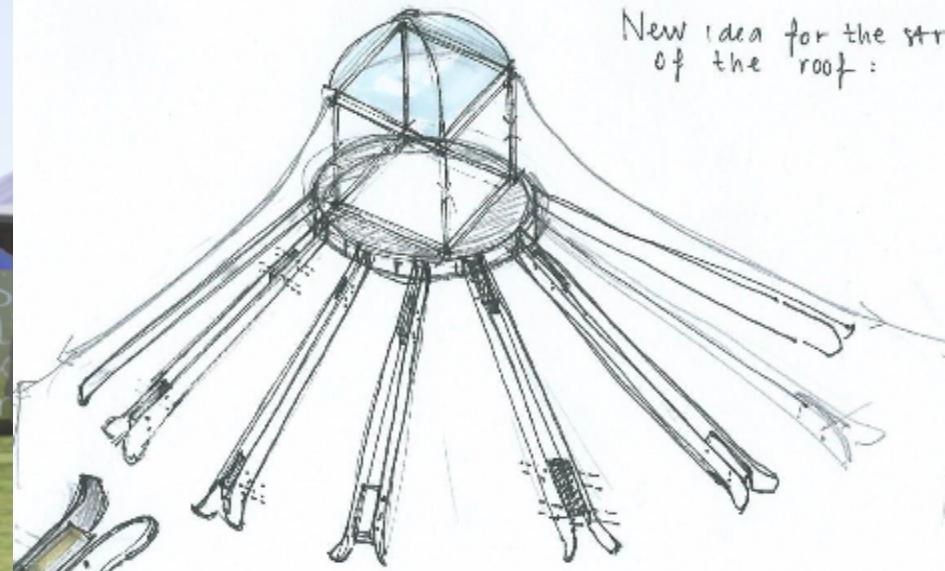

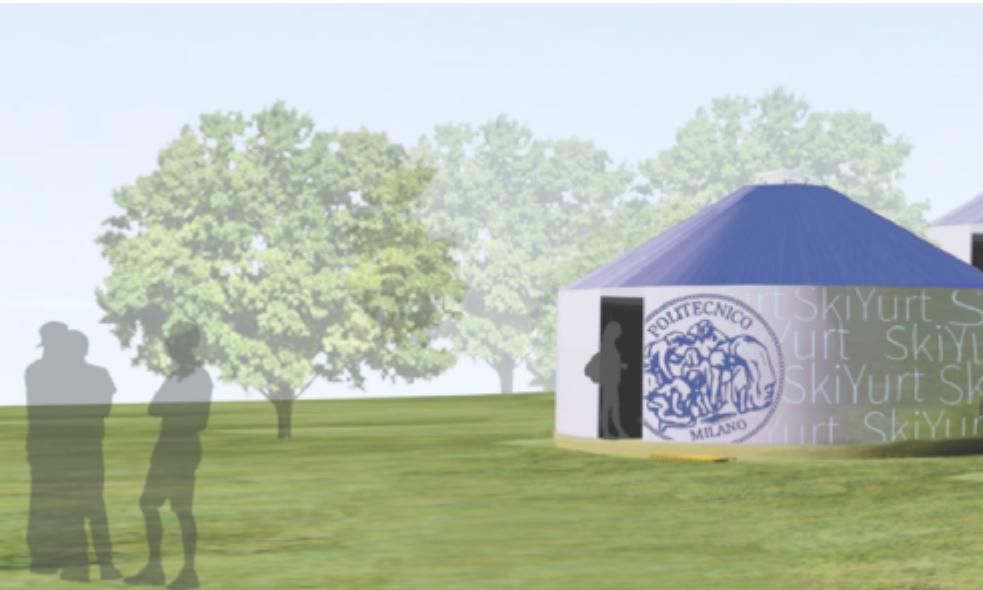

## M2 GCI : Marseille Workshop... not so easy to re-invent something else, but not so easy only to re-adapt

# Project 2015 : the yurth project with politecnico

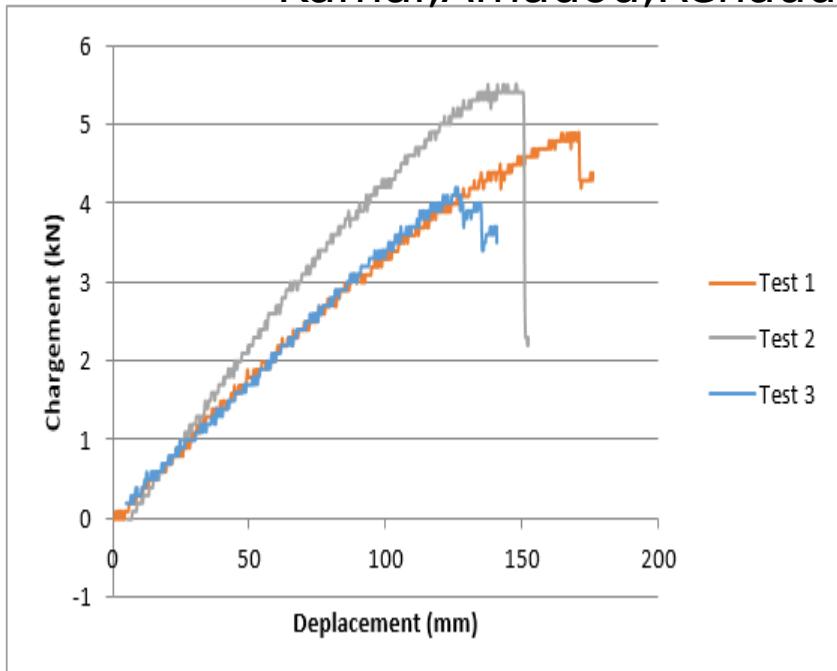

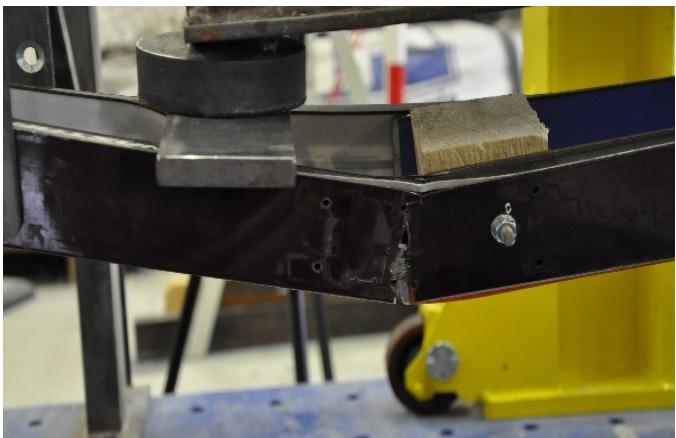

# Project 2015 : the yurth project with politecnico

## Type de rupture :

- cracking
- delamination

## Observation :

- Linear elastic behavior
- Rupture : 4 kN
- Displacement max : 130 mm

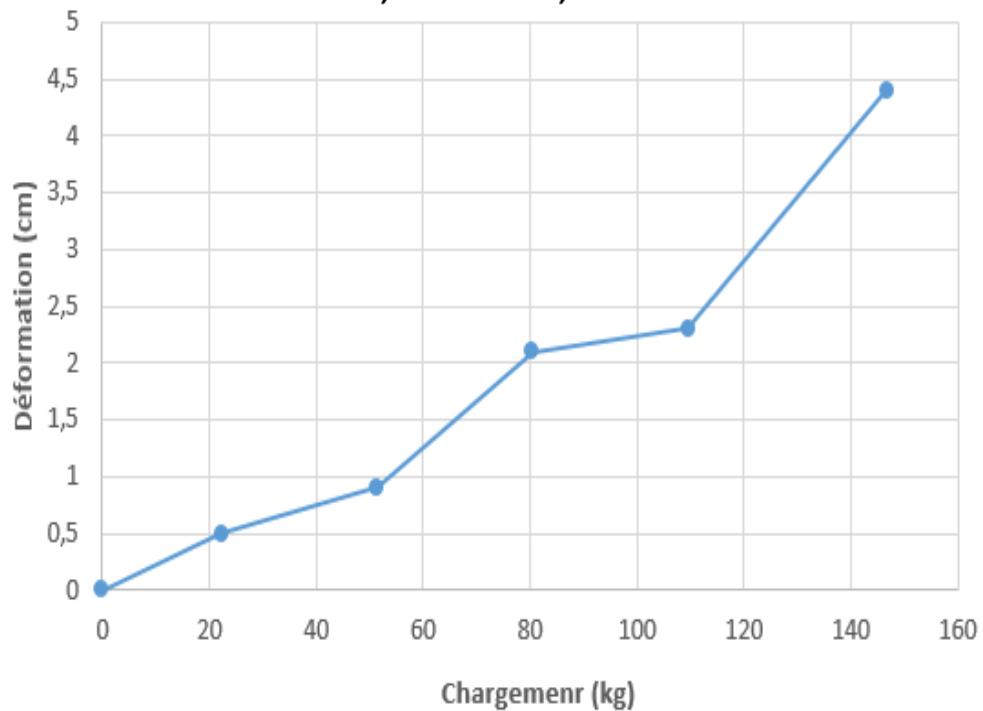

## Conclusion :

Good enough !

## Loss of equilibrium by Rotation

Kamal,Amadou,Renaud'slides

### Observation :

- Linear Elastic behavior
- Loss of equilibrium at 150 kg
- Displacement max = 4,5 cm

### Conclusion :

Good solution as the complete geometry will constrains the yurt and increase resistance.

Prefabricacion y verificacion

# **Concepción Colaborativa y Planificación**

Taller introductorio del curso “concepción colaborativa en diseños urbanismo” (30 h para los ingenieros, 25h los arquitectos)

=>Concepción de **garaje colectivo para bicicletas**  
construido con residuos en un sitio elegido cada año,  
con grupos de un ingeniero por 3 arquitectos  
Evaluación : una nota de grupo, órale, y escrita, más un trabajo personal por los ingenieros.

Una visita de un galpón del municipio a donde se guarda varios elementos ;

**Mini-Taller introductorio de un día completo : Construir con pequeños elementos de madera**

=> imaginar un braguero de 5 metros , cargado con el grupo

Un conjunto de vigas y varios elementos chiquitos de madera (4 metros hasta 30 cm , cable, carril, tornillos, sierra de mano.

# **Garaje para bicicletas realización con el curso “proyecto interdisciplinario”**
